ETCH & FILL PRIMER

Etch & Fill Primer etches the surface of the bare metal to replace the metal conditioning step. Our unique formulation provides unmatched protection against corrosion on bare metal, aluminium and galvanized steel. Etch & Fill Primer surpasses the 200 hour salt spray test. Formulated to be applied direct to metal or flexible substrates such as plastics, fiberglass and body fillers. Top coat can be applied directly on the Primer.

FEATURES:

- Excellent adhesion
- Dries fast
- **New Spray Choice** color matched cap
- Corrosion resistance
- Good filling & sanding

Our Etch & Fill Primer comes with two sprayheads with each can. A red sprayhead, stored in the color matched cap, provides a narrow fan spray. The white sprayhead on the can provides a larger fan spray. This feature gives you the option to choose the width of fan spray that will suit your needs.

DIRECTIONS FOR USE: All substrates must be degreased and sanded with 180-220 grit abrasive. All rust must be removed. Clean metal surfaces with a wax and grease remover. Clean plastic surfaces with a plastic parts cleaner. Wipe dry while the surface is still wet. Featheredge and sand painted surfaces. **Do not use Etch & Fill Primer over newly painted surfaces.** Remove oxidation (white rust) from aluminium. For best results, use when temperature of the can and surface is between 70°F to 75°F.

1. Shake can for 1 minute after mixing ball moves freely. NOTE: Insufficient mixing may cause permanent plugging of the sprayhead. Repeat shaking for 10 seconds after each minute of use.
2. Spray can approximately 8-12 inches from surface.
3. Two thin coats are recommended rather than one heavy coat. Allow 5 minutes flash time between coats.
4. When finished, turn can upside down and spray about 3 seconds to clean out valve and sprayhead.

DRY TIMES:

Self Etching Primer dries to the touch in 10 – 15 minutes. Allow 40 minutes dry time at 70°F to 75°F before top coating or sanding.

CAUTION: It is important to test the compatibility of this product with your paint system before using.

KEY FEATURES AND BENEFITS

1. Finally get a professionally formulated product in the convenience of an aerosol
2. Etch & Fill Primer outperforms other so called "professional" self etching primers and surpasses the 200 hour salt spray test.
3. Convenience of self etching, filling, and surfacing character in a single aerosol product.
4. Two different spray heads that give you the option to choose the width of the fan spray. The "Wide Spray" spray head provides professional compressed air results in the convenience of an aerosol.
